

Calories Math Project: Equivalences

Name: _____

Create several *interesting* equivalences – other ways to express the number of calories in your meal. You could use other food options or show the amount of activity it takes to burn off the meal's calories.

Comparison Food / Activity	Calories in One	How Many Equal the Meal?
<i>Example: an apple</i>	<i>95 calories in one apple</i>	<i>~14.5 apples have the same number of calories as the nugget meal</i>
